Treat the following questions: (5 pts/question)

- I- Describe the difference between MIS and DSS.
- II- Talk about the Internet and the World Wide Web? How have they changed the role of information systems in organizations?
- III- Present the advantages of a digital firm compared to classical firm.
- IV- Answer by **True or false**:
- a) Information system is a database system.
 - b) Neural network is an example of artificial intelligence.
 - c) Fuzzy logic is a software technology that expresses logic in different ways.
 - d) A hierarchical database is a type of database.
 - e) Operational information system is a decision support system.
 - f) One of database advantages is to prevent the data redundancy.
 - g) A data flow diagram (DFD) is used to identify treatments and operations inside a system.
 - h) Distributed database means that the same database is replicated in several locations.
 - i) Internet works in wide world network.
 - j) Modem operates on digital and analog signal.
 - k) Bandwidth is the capacity of data rate in a channel.
 - l) Optical network uses only optic fiber cables.
 - m) WAN is larger than MAN.
 - n) Expert system is a domain of artificial intelligence.
 - o) Firewall is Internet protection software.
 - p) Prototyping is a software engineering concept.
 - q) Duplication means redundancy.
 - r) Data coherency prevents redundancy.
 - s) A data warehouse is a repository of an organization's electronically stored data.
 - t) Data mining is the process of extracting patterns from data.
