

Part 1:

- 1) What is a **MANIFEST** file, what are the sections of such a file?
Give an example with a brief explanation. (2 pts)
- 2) Write the appropriate JQuery script to configure the following **default settings**:
 - Set the default transitions of all the dialog boxes in the application to "FADE" instead of "POP".
 - Set the default time, to add the **hover** and **down** classes on touch interactions for JQuery Mobile buttons to 300 instead of 200.
 - Set the default error message to "**Sorry can't load your page**" instead of "**Error Loading Page**". (2 pts)
- 3) What is the result of the following JQuery mobile code: (2 pts)

```
<script>
$('#Add_item').live ('click', function () {
$('#products').append ( '<li><a href="#">New item</a></li>');
$('#products').listview ('refresh');
});
$('#Select_me').live ('click', function () {
$('#doc').attr ('checked',!$('#doc').attr ('checked'));
$('#doc').checkboxradio ('refresh');
});
</script>
```
- 4) Given the following demo application about the usage of **CSS Sprite** technique. Write the necessary tags/codes to display the same result knowing that the used image is Sprite.jpg and the used icons has respectively the positions : -300px 0; 0 -167px and 225px -83px; (3 pts)

Part 2:

Write the appropriate Code/Tags using (HTML5 – CSS3 – JavaScript and JQuery Mobile) to obtain as result the following Mobile Web Application page , respecting the following conditions:

- The Home page title is "Pick Locations App ".
- When this page is displayed , it appears with : Initial - Zoom = 100%, Min – Zoom = 20% and Max-Zoom = 200%
- The Header/Footer Back Color is Blue.
- All the links of the page have as destination: "#"

At startup, the application, as shown in figure1, should display three textboxes, a map canvas, a table, two buttons and a Navbar.

Figure 1

- When the user clicks on “Get Location coordinates” button, the application must calculate and display the coordinates of the user current location in the corresponding textboxes. The user can type a name of the location in the corresponding textbox, and then the user can click the button “Save Location” to store the place name and its coordinates in the **local storage** of the used browser, and display the obtained information into the table, as shown in figure 2.
- If the user types the place name in its corresponding textbox, and clicks the button “Edit Location”, the coordinates of the selected location should appear in the corresponding textboxes.
- The button “Delete Location” is used to remove the location which is currently in the textbox from the Local Storage and update the table.
- The button “Show in MAP” is used to display the location which is currently in the textbox, in the map canvas using Google maps API as shown in figure 3.
- To remove all the entries from the local storage and update the table, the user can click the “Clear all Storage Data”.
