Circle the correct answer:

Client / Server: (1 point / question)

- 1. Remote Procedure Call (RPC) is used to:**
 - a. Establish a server on remote machine that can respond to queries.
 - b. Retrieve information by calling a query.
 - c. Both a and b.
 - d. None of the above.
- 2. The type of server in two-tier architectures which provides the data to client stored on disk pages is called:**
 - a. Transaction server
 - b. Functional server
 - c. Disk server
 - d. Data server
- 3. Which of the following items are not necessary for client/server?**
 - a. Assure that tools will connect with middleware.
 - b. Understand the requirements.
 - c. Determine network bandwidth capabilities.
 - d. Include the use of file server.
- 4. Which of the following is a benefit of the three-tier architecture?**
 - a. New modules can be built to support specific business needs.
 - b. Performance improve for compiled SQL statements.
 - c. Results in a thinner client and database server.
 - d. All the above.
- 5. Client/Server security includes which of the following?**
 - a. Physical security
 - b. Change control security
 - c. Measures taken to secure all systems
 - d. All of the above
- 6. Three-tier architecture includes which of the following?**
 - a. Three server layers.
 - b. A client layer and two server layers.
 - c. Two client layers and one server layer.
 - d. Three client layers.
- 7. A server cannot serve on which of the following levels?**
 - a. Client Layer
 - b. Business Layer
 - c. Database Layer
 - d. All of the above
- 8. A client device designed so that most processing and data storage occurs on the client side describes:**
 - a. Thin Client
 - b. Fat Client
 - c. Passive Client
 - d. Active Client
- 9. Which of the following statements regarding Client-server computing are true?**
 - a. Client Server computing can be divided into three components, a Client process, a server process and a Middleware in between them for their interaction.
 - b. The Client server environment is typically homogeneous and single-vendor. The hardware platform and operating system of Client and Server are usually the same.
 - c. Database, transaction servers are more advanced and sophisticated types of servers than disk and file servers.
 - d. Client-server computing is merely a transitional phase in the larger trend towards fully distributed computing.
- 10. Stored procedures have which of the following advantages?**
 - a. It takes a longer time to write them as compared to writing Visual Basic.
 - b. Network traffic increases.
 - c. Data integrity improves as multiple applications access the same stored procedure.
 - d. Result in thicker client and thinner database server.

11. A combination of hardware, software, and communication technologies that bring together data management, presentation, and analysis into a three-tier client/server environment best describes:
- BIND.
 - Firmware.
 - Middleware.
 - Logic software.
12. In RMI Architecture which layer Intercepts method calls made by the client/redirects these calls to a remote RMI service?
- Stub & Skeleton Layer
 - Application Layer
 - Remote Reference Layer
 - Transport Layer

Security:

- Which of the following best describes sniffing?
 - Gathering packets to locate IP addresses, in order to initiate a session-hijacking attack
 - Analyzing packets in order to locate the sequence number to start a session hijack.
 - Monitoring TCP sessions in order to initiate a session-hijacking attack.
 - Locating a host susceptible to a session-hijack attack.
- Message _____ means that the sender and the receiver expect privacy:
 - confidentiality
 - integrity
 - authentication
 - none of the above
- Message _____ means that the data must arrive at the receiver exactly as sent:
 - confidentiality
 - integrity
 - authentication
 - none of the above
- What is the purpose of a Denial of Service (DoS) attack?
 - Exploit a weakness in the TCP/IP stack.
 - To execute a Trojan on a system.
 - To overload a system so it is no longer operational.
 - To shutdown services by turning them off.
- In which Cryptography the public key and private key are used?
 - Symmetric-Key Cryptography.
 - Asymmetric-Key Cryptography.
 - Both a & b.
 - None of the above.
- IPS is:
 - Intrusion Prevention System.
 - Intrusion Precaution System.
 - Intrusion Preservation System.
 - Intrusion Provision System.
- What improves the identification and verification technologies?
 - Interoperability.
 - Automation.
 - Authentication.
 - Conformation.
- _____ are individuals or organizations who distribute unsolicited, falsified e-mail attempting to spread spyware or malware, attack organizations or sell products for monetary gain.
 - Spyware.
 - Malware.
 - Insiders.
 - Spammers.
