Treat the following questions:

I- Choose the correct answer: (1 pt / correct answer)

1- What does the following line of code do?

`Textfield text = new Textfield(10);`

- a- Creates text object that can hold 10 rows of text.
- b- Creates the object text and initializes it with the value 10.
- c- Creates text object that can hold 10 columns of text.
- d- The code is illegal.

2- DataInputStream is:

- a- An abstract class defined in java.io.
- b- A class we can use to read primitive data types.
- c- Aclass that defines methods to read primitive data types.
- d- An interface that defines methods to open files.

3- Which exception is thrown by the read() method of InputStream class?

- a- Exception
- b- FileNotFoundException
- c- ReadException
- d- IOException

4- Which are the valid ways to create DataInputStream streams?

- a- new DataInputStream();
- b- new DataInputStream("in.dat", "r");
- c- new DataInputStream(new FileInputStream("in.dat"));
- d- new DataInputStream("in.dat")

5- Which of these packages contains all the classes and the methods required for event handling in Java?

- a- java.applet
- b- java.awt
- c- java.event
- d- java.awt.event

6- Given file is a File object, which of the following are legal statements to create a new file?

- a- file.create();
- b- FileOutputStream fos = new FileOutputStream(file);
- c- FileWriter out = new FileWriter(file);
- d- FileInputStream fis = new FileInputStream(file);

7- Which of these is the method of ObjectOutputStream used to write the object in the input or output stream as required?

- a- write()
- b- Write()
- c- StreamWrite()
- d- writeObject()

8- How an object can become serializable?

- a- If a class implements java.io.Serializable class
- b- If a class or any superclass implements java.io.Serializable interface
- c- Any object is serializable
- d- No object is serializable

9- Which of these interfaces define a method actionPerformed()?

- a- ComponentListener
- b- ContainerListener
- c- ActionListener
- d- InputListener

10- Which of these interfaces define a method itemStateChanged()?

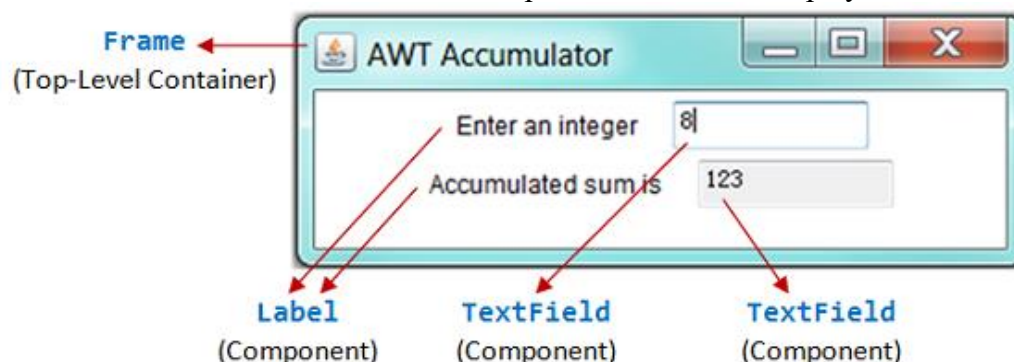

- a- ComponentListener
- b- ContainerListener
- c- ActionListener
- d- ItemListener

II- Write an AWT GUI application called AWTAccumulator, which has four components:

(6 pts)

- 1- a java.awt.Label "Enter an integer and press enter";
- 2- an input java.awt.TextField;
- 3- a java.awt.Label "The accumulated sum is"
- 4- a protected (read-only) java.awt.TextField for displaying the accumulated sum.

The four GUI components are placed inside a container java.awt.Frame, arranged in FlowLayout. The program shall accumulate the numbers entered into the input TextField, and display the accumulated sum on the display TextField.

III- Write in Java a static method that takes in parameters two text files F1 and F2 , reads line by line from the file F1 and stores them at the end of the file F2. Use the Java classes related to the input output management.

(4 pts)
