**Treat the following exercises:**

**I- Choose the correct answer: (1 pt / correct answer)**

- 1- Which of the following is not true?
  - a- PHP can be used to develop web applications.
  - b- PHP makes a website dynamic
  - c- PHP cannot be embedded into html.
- 2- Which of the following variables is not a predefined variable?
  - a- \$get
  - b- \$ask
  - c- \$request
- 3- Which of the following methods sends input to a script via a URL?
  - a- Get
  - b- Post
  - c- Both
- 4- Which of the following functions returns the number of elements in an array?
  - a- count(\$variable)
  - b- len(\$variable)
  - c- strlen(\$variable)
- 5- Which of the following is not a scope of variable in PHP?
  - a- Local
  - b- Global
  - c- Extern
- 6- Where setcookie ( ) function must appear in PHP?
  - a- Before tag
  - b- After tag
  - c- Anywhere
- 7- Data for a cookie stored in \_\_\_\_\_ in PHP.
  - a- ISP Computer
  - b- User's Computer
  - c- Server Computer
- 8- What does isset () function do in PHP?
  - a- There is no such function in PHP
  - b- It checks whether variable is set or not
  - c- It checks whether variable is free or not
- 9- What is the returned result for the function : parseInt("years 10") in JavaScript?
  - a- NaN
  - b- years
  - c- years10
- 10- What is the event of the following timer script function: setInterval (function, X)?
  - a- Timing event
  - b- Number event
  - c- Message event

**II-** Write the corresponding HTML5 and JavaScript tags to create the page that shows the number of correct answers about the questions asked in the form mentioned to the right. **(3 pts)**

The first question: **How many objects did HTML5 provide for data storage?** Is a Combo box that contains the following values: 1, 2, 3. The correct answer is **2**?

The second question: **"Which HTML5 elements are new?"** contains 3 Checkboxes, multiple-choices are possible. The correct answer is **header** and **footer**.

A click on the **"Result"** button executes a function that checks for the number of correct answers and then displays the result in a message according to the following form:

**"Your score is:"** followed by the number of correct answers.

### Please fill out the following questionnaire

How many objects did HTML5 provides for data storage? \_\_\_\_\_

1 ▾

Which HTML5 elements are new? \_\_\_\_\_

- ☐ header
- ☐ footer
- ☐ div

Result

**III-** Assume that a MySQL database is already created with the following characteristics:

**(5 pts)**

- Server name: 127.0.0.1
- Database name: Audio
- Login name: Company
- Login password: Panasonic
- SQL table:

A- Create a PHP script that inserts the following data into the "Item" table:

- Code: 10254
- Brand: Mixer
- Model: SRK 101
- Manufacturing Date: 07 April 2005

The PHP script should display in the HTML document an appropriate message if the insertion succeeded, otherwise an error message must be displayed.

B- Create a PHP script that modifies the data of the item having code = 3520 as follows:

- Brand = smart
- Model = SM101

The PHP script should display in the HTML document an appropriate message if the modification succeeded, or an error message otherwise.

| Item                      |                 |                 |
|---------------------------|-----------------|-----------------|
| <u>Code</u>               | <u>int</u>      | <u>not null</u> |
| <b>Brand</b>              | <b>char(20)</b> | <b>not null</b> |
| <b>Model</b>              | <b>char(30)</b> | <b>not null</b> |
| <b>Type</b>               | <b>char(25)</b> | <b>not null</b> |
| <b>Manufacturing Date</b> | <b>date</b>     | <b>not null</b> |

**IV-** Write a JavaScript function named lastPosition that:

**(2 pts)**

- Accepts as parameters an array x of integer type and an integer y.
- Determines and then returns the last position of y in x if found otherwise it will return -1.
