Answer the following questions :

I- What does the following Java program show on the screen?

(3 pts)

```
import java.io.IOException;
import java.net.URL;

public class Main {

    public static void main(String[] args) {
        try {
            URL url =
                new
                URL("https://www.clientserveur.com:8080/abc/docum
                ent.html?abc=ebf#k6ij");
            System.out.println("URL is " + url.toString());
            System.out.println("Protocol is " + url.getProtocol());
            System.out.println("Authority is " +
                url.getAuthority());
```

```
System.out.println("Host is " + url.getHost());
System.out.println("Port is " + url.getPort());
System.out.println("Default port is " +
    url.getDefaultPort());
System.out.println("Path is" + url.getPath());
System.out.println("File is " + url.getFile());
System.out.println("Query is " + url.getQuery());
System.out.println("Ref is " + url.getRef());
System.out.println("User Info is " + url.getUserInfo());
} catch (IOException e) {
    e.printStackTrace();
}
}
```

II- Draw a comparison table between the two-tier client-server architecture and the three-tier client-server architecture?(2.5 pts)

III- What are the goals of computer security?

(2 pts)

IV- Talk about material, physical and environmental security?

(2.5 pts)

V- Choose the correct answer: (1pt/ correct answer)

1- Which protocol is used to create a virtual private network (VPN)?

- a- IPSEC
- b- POP3S
- c- IMAP

2- What is the role of a Middleware in a client / server environment?

- a- A link between the client and the session layer in a data server.
- b- A link ensures the connections between the data servers and the development tools on the client workstations.
- c- A link provides connections between client and server in the architecture at two levels.

3- Method InetAddress[] getAllByName(String):

- a- Returns an array containing the bytes of the internet address.
- b- Returns one and only one internet address associated with the host name provided as a parameter.
- c- Returns an array of internet addresses associated with the host name provided as a parameter.

4- Why can the Internet be seen as a facilitator of crime?

- a- Internet allows dissemination of criminal in operative's modes through malware and cyber attacks
- b- Internet allows the dissemination of criminal in operative's modes through users and servers.
- c- None of the above.

5- RPC (Remote Procedure Call) is a procedure in language:

- a- JAVA
- b- C
- c- None of the above.

6- Asymmetric cipher algorithm.

- a- Diffie-Hellman.
- b- RSA
- c- All of the above.

7- CORBA is abbreviation of:

- a- Common Object Request Broker Architecture.
- b- Common Object Response Broker Architecture.
- c- Consolidate Object Request Broker Architecture.

8- What is a strong password?

- a- Such password should be long and include special characters.
- b- Such password should contain upper and lower case characters.
- c- All of the above.

9- OBJECT REQUEST BROKER (ORB) est un :

- a- Middleware manages client / server relationships between objects.
- b- Middleware manages server / server relationships between objects.
- c- Middleware manages client / server relationships between objects / functions.

10- A Firewall works on the layer:

- a- 4 of OSI model
- b- 3 of OSI model.
- c- 1 of OSI model.
